

Palfrey Street ReportPlus 1.0

For Open Text Content Server and Livelink

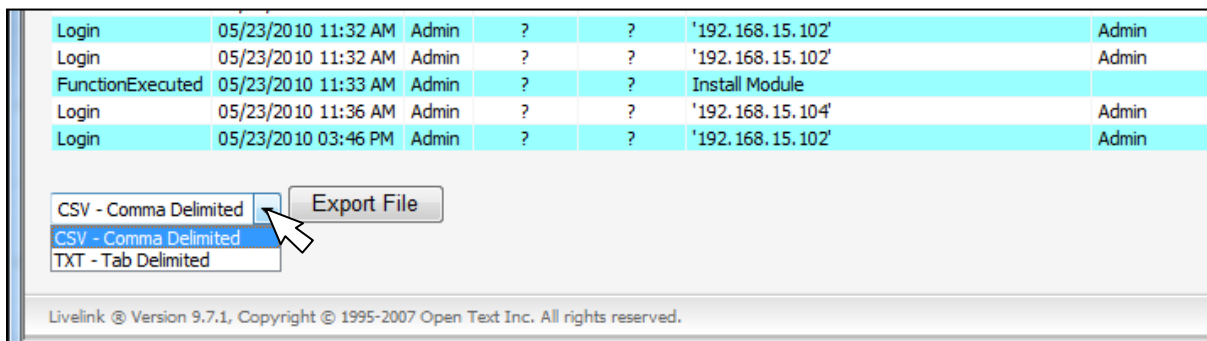

July 2010

Overview

ReportPlus 1.0 provides a one-click method for users save the results of a LiveReport to a comma separated (CSV) or tab delimited (TXT) file. The data from an exported report can now be easily opened and formatted in a spreadsheet application, such as Microsoft Excel, or imported into another application for analysis.

Easy To Use

ReportPlus 1.0 adds an “Export” button at the end of every LiveReport. Just select the format, click and specify where to save the file.

CSV - Comma Delimited
CSV - Comma Delimited
TXT - Tab Delimited

Export File

Livelink © Version 9.7.1, Copyright © 1995-2007 Open Text Inc. All rights reserved.

ReportPlus creates the output file from the displayed contents of the LiveReport in the browser. It does not re-run the report to fetch the data a second time, so there is no waiting for the report to run again.

Compatibility

ReportPlus 1.0 can be installed in Livelink 9.6.0, 9.7.0, 9.7.1 and Open Text Content Server 9.7.1. It is designed to work with Microsoft Internet Explorer 7 and 8 and Firefox 3.0 and 3.5. ReportPlus extends the functionality of the Report 2.0 module, which is normally installed as part of the core Content Server or Livelink. The latest version of ReportPlus 1.0.1 now includes the Palfrey Street Excel Web Data Fix module.

Licensing

ReportPlus 1.0 can be licensed by individual Livelink instance (server) or as a site license for a single organization. For more information or questions, email info@palfreystreet.com; please visit our website for purchase information: <http://palfreystreet.com>.
